# An open-source platform for automation of complex optical measurements at the Molecular Foundry

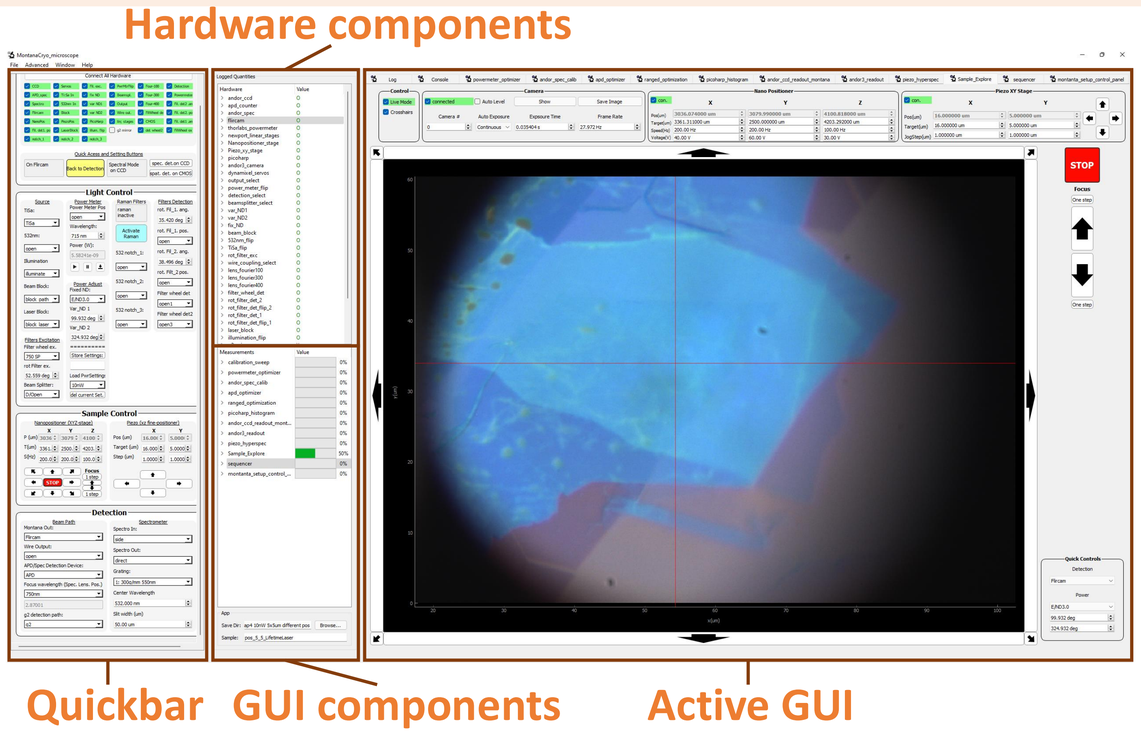

Jonas Zipfel, Benedikt Ursprung, Archana Raja, Edward Barnard

## Hardware

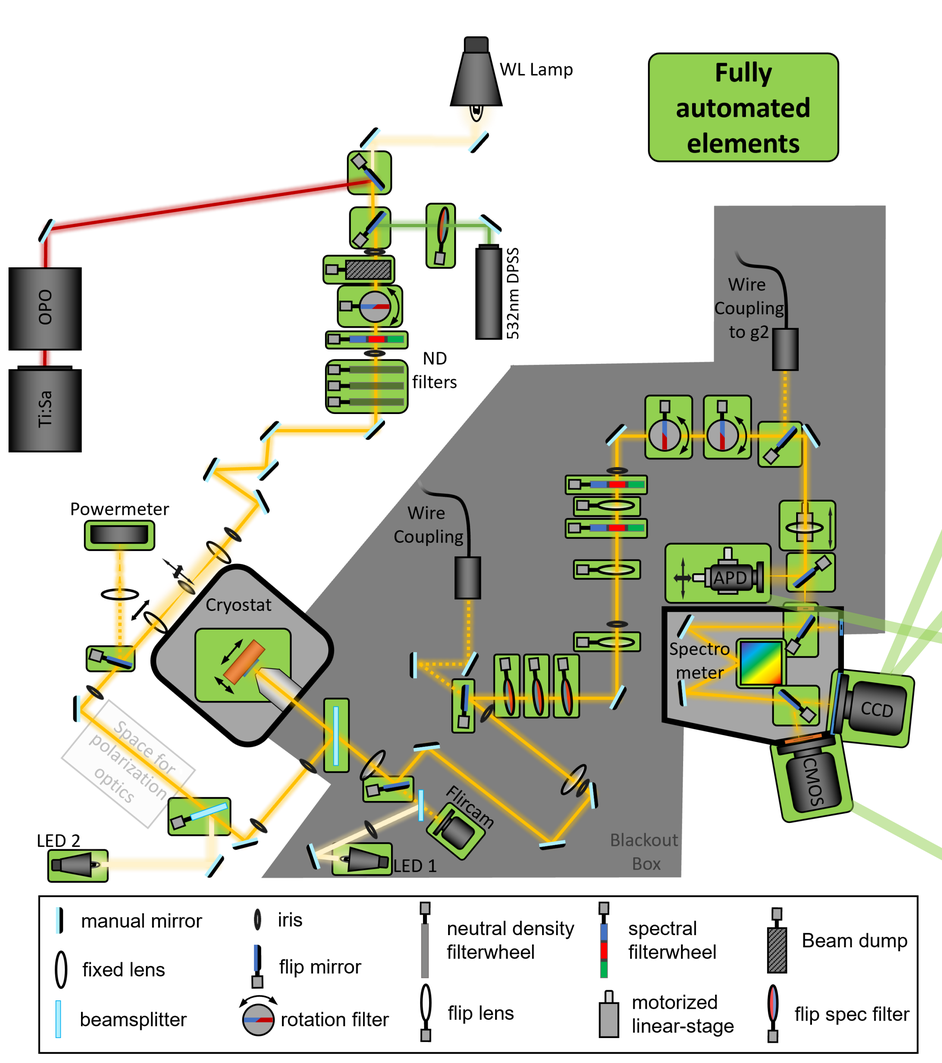

- Low-cost commercial components
- Uncompromised precision and reproducibility
- Fully customizable
- Remote controllable
- Large database of 3D-blueprints available

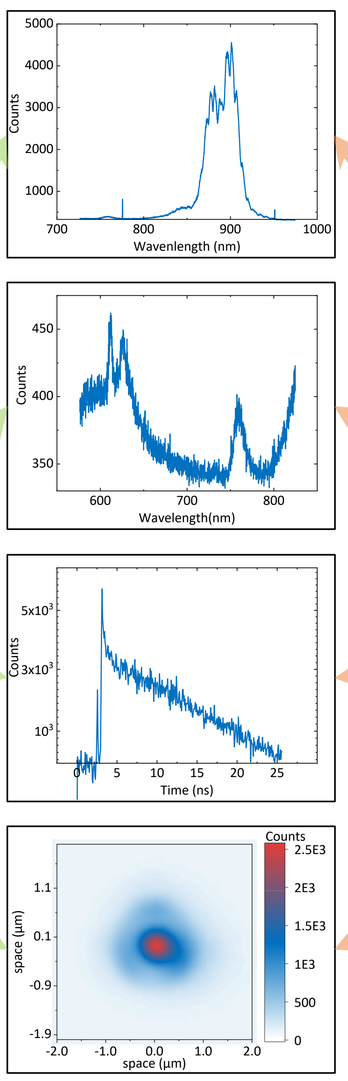

## Software (ScopeFoundry)

- Open-source python framework
- Modular building approach
- Large library of hardware drivers available

## Complex setups and routines – An example

## Why ScopeFoundry?

- Entirely automate complex setups
- Essentially eliminate human errors
- Customize GUIs for remote control
- Easily correlate measurements
- Be more time efficient
- Save a lot of money!
